Section - CSE-'Z'

Microservices and Event-Driven Architecture Scenario

Scenario :- An e-commerce platform, with services like product, cart, order, payment, notification, each running independently.

To enable real-time communication & loose coupling, it uses Event-Driven Architecture.

SOLID principles Applied :-

- S: services have distinct responsibilities.
- O: Extendable with new features (e.g, new payment method)
- L: Interfaces allow for flexible service replacement.
- I: Services expose only required endpoints.
- D: services rely on abstract event formats.

DRY in practice :-

- shared logic like logging & auth is centralized.
- Common event schemas reused.

KISS in practice :-

- services are small, focused, and easy to understand.
- APIs remain minimal & purposeful.
