

CAN Assignment - 2

Name - Chenmayee Rana
Regd. No. - 2141018149
Section - CSE 'Z'

Real-world Application of parallel Computing & Networked systems.

Application chosen: Online video streaming platforms.

• Use of parallel Computing :-

Parallel computing plays a critical role in video processing tasks such as encoding and transcoding. When a video is uploaded, it is broken into smaller segments & processed simultaneously using multiple CPU or GPU cores. This significantly reduces the time needed to prepare videos in various formats & resolution.

• Use of Networked Systems :-

Video streaming relies heavily on networked systems for delivering content to users across the world. Content Delivery Networks are used to store & distribute video files across multiple geographically distributed servers. Streaming protocols & real-time data transfer ensure smooth playback.

Importance :- Parallel Computing improves processing speed, while networked systems ensure efficient delivery - together supporting a high quality user experience for millions of users.
